

Handi-Talky Commander

Multi-platform control software for Amateur Radio handheld transceivers

Version 0.1.44 · August 20, 2026

HTCommander is a free, open-source application that turns your computer or phone into a full control console for a range of Bluetooth-capable Amateur Radio handheld transceivers. It provides channel programming, digital messaging (APRS, Winlink, BBS), mapping, packet capture, file transfer and audio features across desktop and mobile platforms.

An Amateur Radio license is required to transmit using this software.

At a glance

License:	Open Source
Platforms:	Windows, macOS, Linux, Android, iOS, Web
Connection:	Bluetooth LE + Audio
Cost:	Free

SUPPORTED RADIOS

HTCommander supports EchoLink and the following Bluetooth-capable transceivers:

- BTech UV-Pro
- BTech UV-50Pro
- Radtel RT-660
- Radioddity GA-5WB
- Radioddity DB50-B Mini
- EchoLink (network)
- Vero VR-N75 / VR-N76
- Vero VR-N7500 / VR-N7600

CORE FEATURES (ALL PLATFORMS)

- **Channel Programming.** Configure, import, export and drag-and-drop channels to build the ideal configuration for your usage.
- **APRS.** Send and receive APRS messages, set routes, send SMS to phones, request weather reports, and use authenticated messaging.
- **BSS Protocol.** Support for the proprietary short binary message protocol from Baofeng / BTech.
- **APRS Map.** OpenStreetMap-based map showing all nearby APRS stations at a glance.
- **Winlink Mail.** Send and receive email over the Winlink network, including attachments.
- **Address Book.** Store APRS, Winlink and Terminal contacts for quick access.
- **Terminal.** Communicate in packet mode with other stations, users or BBS systems.
- **BBS.** Built-in basic BBS that also acts as a Winlink gateway.
- **Packet Capture.** Capture and decode packets with the built-in capture tool.
- **GPS.** Use the radio's built-in GPS on supported firmware.
- **Torrent File Exchange.** Many-to-many file exchange over 1200 baud FM-AFSK.

EXTENDED FEATURES

Desktop + Android

Desktop only

- **Bluetooth Audio.** Listen and transmit through computer speakers, microphone or headset.
- **SSTV.** Send and receive images; reception is auto-detected, drag-and-drop to send.
- **Speech-to-Text / Text-to-Speech.** Convert incoming audio to text and typed text to speech.
- **AGWPE Protocol.** Route other applications' traffic over the radio using AGWPE.

SYSTEM REQUIREMENTS

Windows

64-bit Windows 10 / 11
Bluetooth LE adapter

macOS

Universal binary
Bluetooth LE support

Linux

x64 / ARM64
BlueZ Bluetooth stack

Android

Android 5.0 or higher
Bluetooth LE

iOS

Bluetooth LE support

Web

Chrome / Edge with
Web Bluetooth support

AVAILABILITY & DISTRIBUTION

Desktop packages

- Windows: .msi installer (x64)
- macOS: .dmg universal binary
- Linux x64/ARM64: .tar.gz, .deb, .rpm, .AppImage

Mobile & Web

- Android: Google Play or .apk
- Web: browser version (Chrome / Edge)
- Source & releases on GitHub
